

Hardening the frequency server - feedback

 futurelearn.com/courses/concurrent-programming-erlang/1/steps/169225

How did you get on with the previous exercise of 'hardening' the frequency server?

Use this discussion to comment on any particularly interesting approaches or solutions that you have come up with, or that you have seen from others. Were there any common problems or mistakes? What do you think are the 'lessons learned' - and what more do you think may be required to ensure robustness of this system in practice?
